1. Behaviour and attitude to adopt during the games

Dear participants,

The Engineering Games represent the opportunity to fraternize, to meet new people, to build a network of contacts and to get out of your comfort zone all while having fun during these four incredible days.

However, we remind you that it is, after all, an engineering competition which requires a certain seriousness from your part. Many sponsors will be present to ensure the viability of the event, but also to network and recruit the best students of Quebec. Also, certain issues regarding the image portrayed these past few years have put the reputation of the games in danger. Each time an incident relating to bad behaviour would occur, more financial and logistics issues would occur and certain aspects of the games had to be modified or let go.

We therefore ask you to avoid any behaviour that could ruin the experience for others. The main objective of the Games is not to be a big party. Remember that your actions and attitude in each activity have a direct effect to the success or failure of the event. The organizing committee will not hesitate to expulse a participant that does not respect the code of conduct. We would like you to help us assure that we will have a successful edition of this event while being respectful with everyone as well all equipment while being civil and showing team spirit. This is the occasion for all of you to collaborate to bring back the exemplary values of this competition that have been around for 29 years.

**SANS OUI
C'EST NON!**

2. Message from the organizing committee

In this booklet, you will find all necessary information concerning the event, including the schedule of the competitions, meals, and transportation to all scheduled activities for these four jam packed days. This competition would not be possible without our sponsors. This booklet also gives us the opportunity to thank our sponsors for their generosity which allows us each year to host this incredible event.

If you still have questions left unanswered in this booklet, it would be our pleasure to answer and guide you during the competition. The Games are the occasion for you to surpass yourselves and apply your knowledge while maintaining an exemplary team spirit to well represent the spirit of the games.

We hope that you have as much fun participating as we did preparing this event for you!

The organizing committee

3. Theme

From January 4th to 8th 2019, Sherbrooke University will host the 29th edition of the Engineering Games. For this occasion, the organizing committee would like to invite the participants to **reach new heights** as a part of their duties in engineering.

It is under this theme that the 12 participating universities will face each other in various competitions which will highlight their academic, sports, and cultural aptitudes and, for the first time this year, their entrepreneurial aptitudes.

It is therefore not enough to simply have engineering knowledge. The Engineering Games are looking for the best, the “creme de la creme”, the fearless and those who are ready for anything to make it to the top. Will you reach new heights before your adversaries?

The organizing committee is challenging you to show that your delegation does not fear the altitude and will bring back the cup of the Engineering Games!

4. Sustainable development

We would like to invite the participants to follow us in the quest of reaching new heights all while being sustainable!

The organizing committee of the Engineering Games has committed itself to having a sustainable environment. We will highly manage any waste produced, the reduction of waste at the source and other sustainable touches that you will experience during the games. We would like to add ecoresponsible initiatives to the Engineering Games traditions, but we need your help to do so!

Points will be accorded if:

- The delegation helps in sorting out waste at the end of each meal (for example, helping out the volunteers to sort out waste);
- You avoid useless waste (for example, using unnecessary materials);
- You avoid the generation of single use waste (for example, using a reusable water bottle);
- You encourage the sustainable efforts of others (for example, not throwing out liquids in the recycling bags for cans);
- You have any other sustainable initiative.

Therefore, pay attention to any indications that are given. You will see that with certain concrete actions, it is possible to reduce the environmental impact of more than 450 people. A total of 2% of participation points are accorded to sustainable behaviour. You will therefore be rewarded for your consciousness and will allow your team to obtain additional points!

5. Addresses and important information

IMPORTANT : You must always wear your badge on you the entirety of the games. Otherwise it will be impossible for you to access meals and participate in activities.

You must also have a valid piece of identification (valid drivers licence or medicare card) on you for the opening night.

We also ask you to arrive 5 minutes in advance for all transportation to avoid delays. Thank you!

7. Ice breaker games

This activity is the occasion for you, the delegates, to get to know each other. During the first day, at the hotel shortly after your arrival, you will meet short innovative challenges in teams composed of people from every delegation. These teams, 24 in total, will be revealed while receiving your badges. The following tables show the order of each team at the 12 stations that will be presented.
