Press release

January 7th 2019

The harmful consequences of human activities are pushing the earth to its limits, meaning that it will soon be impossible to operate in a safe ecosystem.

Thus, the scientists and climatologists of the Bureau of Engineering and Planning of Competitions Organized as Multidisciplinary, BEPCOM, ensure the imminence of a series of environmental disasters.

This is likely to eradicate all life on Earth at an alarming rate. These unprecedented events will begin in September 2019. It is therefore an honour for me to announce the launch of the "JDG2020" mission, starting next January.

It is now time to start the process of selecting the 425 most innovative, responsible, creative, and respectful people. BEPCOM therefore requires that each Quebec university select among the survivors their 46 most talented engineering students.

This selection is based on their ability to solve complex problems related to the reengineering of a greener, healthier and more sustainable world.

The objective of this mission is to improve the situation on Earth, preserve knowledge, responsibly use the remaining resources and relaunch activities in a sustainable way.

It will be through a series of challenges, developed by BEPCOM's leading experts, that the group will be put to the test to challenge all their skills and develop solutions to the 10 priority issues for BIPCOM.

Change the world with Engineering Games,

Anne-Sophie Lachapelle
BEPCOM Chief Organizer
